DIRECTIONS FOR USE

CARROTS (Seed Crop Only)

Apply *Orthene 75 S* at a rate of 1 1/3 lb product per acre in a minimum of 10 gallons (by ground or air application method) per acre spray volume for the suppression of lygus bugs and control of green peach aphids in carrots grown for seed. Use four, 1/3 lb water soluble packets to treat one acre. Do not break open packets. It is suggested that a buffering agent be added to stabilize the spray solution and that an anti-drift agent be added to minimize off-target movement. There is a minimum 7-day retreatment interval for subsequent application, but do not make more than 2 applications per season.

Do not spray if there is another seed field within 1/2 mile that is being pollinated. Do not apply this product to blooming carrot seed crop during the pollination period. Apply at the end of the pollination period. Bee colonies used for pollination must be removed from the field being treated prior to the application.
3. Do not apply to carrots grown for fresh market or processing.
