*N-Trichloromethylthio-4-cyclohexene-1,2-dicarboximide
This product contains 4 pounds of Captan per gallon.

ENVIRONMENTAL HAZARDS

This pesticide is toxic to fish. Do not apply directly to water or areas where surface water is present or to intertidal areas below the mean high water mark. Drift and runoff from treated areas may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water by cleaning of equipment or disposal of wastes.

DIRECTIONS FOR USE

Follow all applicable directions, restrictions, and precautions on this Supplemental label and the main EPA-registered label. It is a violation of federal law to use this product in a manner inconsistent with its labeling. This label and the federal label for this product must be in the possession of the user at the time of pesticide application. It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

GENERAL USE PRECAUTIONS:

Captan is not a stand alone product for control of the entire complex of rot organisms. Captan should be used in combination with other fungicides registered for use on Easter Lily bulbs. For additional information on products that captan should be combined with, contact Oregon State University Extension or the Easter Lily Research Foundation.

CROP USE: Directions for Aid in Controlling Root Rot in Easter Lily Bulbs.

To aid in the control of root rot in Easter Lily bulbs, mix 1 gallon of this product with enough water to make a 100 gallon dip solution. Soak bulbs for a minimum of 15 minutes before planting. Apply the remaining post-application mixture or "left-over" solution in-furrow over the bulbs, or over the top of the planting beds. When disposing of the post-application mixture, do not exceed the rate of 100 gallons of solution per acre, or the maximum per acre rate of any other product in the tank mix.
