

**FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF OREGON
SECTION 24(c) Supplemental Label
For use on FOR Highbush Blueberries**

24(c) Registrant

This label valid until December 31, 2013 or until otherwise amended, withdrawn, canceled, or suspended.

EPA REG. NO. 34704-803

EPA SLN NO. OR-050016

ACTIVE INGREDIENT:

Dimethylamine salt of 2,4-Dichlorophenoxyacetic acid 46.6%

INERT INGREDIENTS:

53.4%

TOTAL 100.0%

**KEEP OUT OF REACH OF CHILDREN
DANGER PELIGRO**

DIRECTIONS FOR USE

This label and the federal label for this product must be in the possession of user at the time of pesticide application

Follow all applicable directions, restrictions, and precautions on this supplemental label and the main EPA-registered label. It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 48 hours. PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is: coveralls, chemical-resistant gloves, such as barrier laminate, nitrile rubber, neoprene rubber or viton, shoes plus socks and protective eyewear.

Blueberries - Apply 3 pints Saber per acre (1.4 lb ae) in 50 gallons of water per acre. A first application should be made in the spring as a directed, shielded spray to the weed strip between the blueberry rows, avoiding contact with the blueberry plant foliage. A second application of 3 pints per acre (1.4 lb ae) in 50 gallons of water per acre may be made in the fall if needed. Limited to 2 applications per year. Maximum of 1.4 lbs ae/acre per application. The PHI (pre harvest interval) is 30 days.

To avoid injury to blueberries, do not apply if the temperature is 65 degrees or higher.

Restrictions

Do not apply this product through any type of irrigation system. Do not apply by aerial application. Do not apply directly to blueberry plants or injury may result. Avoid applications when winds are blowing toward nearby susceptible plants, or when temperature inversions are expected. Do not make direct application or allow spray drift to contact susceptible plants since very small quantities of this herbicide can cause severe injury in the growing or dormant period. Plants contacted may be killed or suffer significant injury resulting in grade or yield losses. Soil residue of this product may temporarily inhibit seed germination and plant growth. Do not apply in or near greenhouses.

ENVIRONMENTAL HAZARDS

Do not apply when weather conditions favor drift from treated areas. Do not apply when a temperature inversion exists. Such a condition is characterized by little or no air movement and an increase in air temperature with an increase in height. In humid regions a fog or mist may form. An inversion may be detected by producing a smoke column and checking for a layering effect. If questions exist pertaining to the existence of an inversion, consult with local weather services before making application. This product is toxic to aquatic invertebrates. Drift or runoff may adversely affect aquatic invertebrates and non target plants. For terrestrial uses, do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwaters. Avoid contamination of water supplies that may be used to irrigate crops, or for domestic purposes. Do not use the same spray equipment for other purposes unless thoroughly cleaned.

Groundwater Contamination:

Most cases of groundwater contamination involving phenoxy herbicides such as 2,4-D have been associated with mixing/loading and disposal sites. Caution should be exercised when handling 2,4-D pesticides at such sites to prevent contamination of groundwater supplies. Use of closed systems for mixing or transferring this pesticide will reduce the probability of spills. Placement of the mixing/loading equipment on an impervious pad to contain spills will help prevent groundwater contamination.
