For PRODUCT USE Information Call 1-866-99BAYER (1-866-992-2937)

DIRECTIONS FOR USE

This label and the federal label for this product must be in the possession of the user at the time of pesticide application. Follow all applicable directions, restrictions, and precautions on this label and the main EPA-registered label. It is a violation of federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

GENERAL INFORMATION

VITAVAX-34 aids in the control of seed decay, damping-off and seedling blight.

Use only as a grass seed treatment for grass seed being exported to countries requiring treatment of carboxin before importation.

Users should verify actual registered rate in country of destination and/or use. This label is based solely on treatment requirements made by countries requiring carboxin to be applied to imported grass seed. Chemtura Corporation makes no claims as to the effect of this product on disease control or seed germination. All such risks shall be assumed by the Buyer.

APPLICATION DIRECTIONS – COMMERCIAL SEED TREATMENT

VITAVAX-34 is a seed treatment which should be applied as a slurry treatment by machine.

Application should be made using mechanical slurry or mist-type treatment equipment. Use 3.9 fluid ounces VITAVAX-34 per 100 pounds of seed. For best results, dilute product with enough water to ensure uniform coverage. Seed should be sound and well cured prior to treatment. Care must be exercised in the handling of treated seed.

USE RESTRICTIONS:

- When using formulations that do not contain dye, to comply with 21 CFR Chapter 1, Section 2.25 and 40 CFR 164.155, treated seed must be colored with an approved dye (40 CFR 180.1001) to distinguish and prevent subsequent and inadvertent use as food for man or feed for animals.
- Do not use treated seed for food or feed purposes.
- Treated seed cannot be planted in the United States and must be exported.

COMPATIBILITY: VITAVAX-34 can be used in combination with other flowable seed protectant fungicides and insecticides. Consult a seed treatment specialist regarding combining of products with VITAVAX-34 for specific seed crop allocations and slurry compatibility. Tank mixes should be pre-tested to determine physical compatibility between formulations, and to assure there will be no adverse phytotoxic reactions.

SEED LABELING (Commercial Seed): Treated seed must be labeled, "For Export Only – Not to be sold or offered for sale in the United States." The U.S. Seed Act requires that treated seed be labeled with the following information: "This seed treated with Carboxin. Do not use treated seed for food, feed, or oil purposes. Do not graze or feed livestock on treated areas for six weeks after planting. After the seeds have been planted, do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 12 hours. Exception: Once the seeds are planted in soil or other planting media, the Worker Protection Standard allows workers to enter the treated area without restriction if there will be no worker contact with the seeds or soil/media subsurface. Treated seeds exposed on soil surface may be hazardous to birds. Cover or collect spilled seeds."
