ADMIRE® PRO Systemic Protectant

For Post-Harvest or Dormant Treatment Use on Cranberry to control Black vine weevil.

EPA Reg. No. 264-827
EPA SLN. No. WA-050013

24(c) Supplemental Label

FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF WASHINGTON

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. This label must be in the possession of the user at the time of pesticide application. Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA registered label.

This label for ADMIRE® PRO Systemic Protectant expires and must not be distributed or used in accordance with this SLN registration after December 31, 2010.

RECOMMENDED APPLICATIONS

Pests Controlled	Rate fluid ounces/Acre
Black vine weevil	7.0

Post-Harvest or Dormant Spray: Apply specified rate of ADMIRE PRO to moist soil in one of the following methods:

- As a broadcast soil spray (ground application only) or spot-spray directed to the infested bed area using a minimum of 20 gal of water per acre followed **immediately** by 0.1 to 0.3 inches of rain or irrigation water.
- As a chemigation application with 600 to 1000 gal water followed by 0.1 to 0.3 inches of irrigation water.

For best control of black vine weevil, application timing should target the larval stages and should be made when crop is dormant (November 1 to March 1). If needed, a second application of ADMIRE PRO may be applied post-bloom.

RESTRICTIONS

- Do not apply during bloom.
- Do not apply within 30 days of harvest.
- Do not apply more than a total of 0.5 lb active ingredient (14 fluid ounces) of Admire PRO per acre per season as a soil or chemigation application.
- Do not apply more than two applications of ADMIRE PRO per acre per year.

NOTE: ADMIRE PRO has not been tested for crop response in tank mixes with other registered cranberry fungicides or insecticides. If tank mixing is desired, premix a sample of the ADMIRE PRO and the desired fungicide or insecticide partner at labeled rates and apply to a small area. Evaluate crop response within 48 hours and for at least two weeks prior to utilizing the tank mix on larger acreage. If crop injury results from the premix test, do not apply the tank mix to larger acreage.

NOTE: Follow these and all other Use Directions and Precautions on the package label.

This pesticide is toxic to wildlife and highly toxic to aquatic invertebrates. AdmirePRO Systemic Protectant should not be used under this SLN label where impact on listed threatened or endangered species is likely. You may refer to the WSDA Endangered Species Program web site at <http://agr.wa.gov/PestFert/EnvResources/EndangSpecies.htm>, or contact the Washington Department of Fish & Wildlife, National Marine Fisheries Service (NOAA Fisheries) or US Fish & Wildlife Service for information regarding aquatic species listed as threatened or endangered. Consult the federal label for additional restrictions and precautions to protect aquatic organisms.

CONTAINER DISPOSAL GUIDANCE: Pesticide containers must be properly cleaned prior to disposal. The best time to clean empty pesticide containers is during mixing and loading, because residue can be difficult to remove after it dries. Triple rinse (or pressure rinse) the pesticide container, empty all pesticide rinse water into the spray tank, and apply to a labeled crop or site. Recycling cleaned containers is the best method of container disposal. Information regarding the recycling of empty and cleaned plastic pesticide containers in Washington is available on the internet from WSU at <http://pep.wsu.edu/waste/wd.html> or from WSDA at <http://agr.wa.gov/PestFert/Pesticides/WastePesticide.htm>. Cleaned containers may also be disposed of in a sanitary landfill, if permitted by the county. Burning is not a legal method of container disposal in Washington.
